SUPPORTED BY

Following the COP26 climate summit, countries and companies all over the world have committed to reduce their carbon emissions by 2050. Some have set challenging targets to achieve carbon neutrality before this.

But is this achievable? Are the changes which have to be made too radical? Or not ambitious enough?

High carbon emission costs (and high energy prices) will influence strategic choices, whilst improvements in digital technologies will influence both the way we operate and the way we work.

Industrial leaders and young sustainability champions will show their commitment to being part of the climate change solution through a series of case studies on:

- The Circular Economy
- Energy Transition
- Digital Operations Technologies
- Innovation in Engineering and Construction

Mixed breakout groups of industry managers and students will discuss these contributions and commitments in order to better understand the “2050 challenge”.
